(54) Title: METHOD FOR PROVIDING A SHORTCUT TO SHIPPING INFORMATION

(57) Abstract: A method and system are provided for a user to determine the status of a shipment being transported by a carrier. The user performs a transaction at a web site, and chooses a type of shipment. A file in markup language includes at least one link to shipment tracking information, and this file is provided to the user and saved locally at a user device. The user activates the file to check the shipping status, which is then displayed. In this way, the user is able to access aggregated shipping information from a plurality of carriers. Also, the user is able to obtain pinpoint shipping status, if the user needs more details than merely finding out a checkpoint through which a shipment has passed.
